

# Night Time Delivery at Botwell Green Leisure Centre

Seven huge glulam beams have been installed at our Botwell Leisure centre site in Hillingdon. Each measuring 35m in length, the beams form the main roof structure of the swimming pool building. The European Whitewood beams were manufactured in Finland, coated with preservative and stained before being shipped over to England.

Each beam weighs 4.5 tonnes and due to their size, transport was restricted on public highways before 7 o'clock in the evening. The vast size of the delivery lorries themselves required our site team to organise road lane closures to enable the vehicles to get through the local streets.

The impressive beams finally arrived on site at 10pm and were erected into position the next day by a 150 tonne all terrain crane.
