

Sidcup Leisure Centre Awarded Sustainability Award

We are delighted to announce that our recently completed leisure centre project in Sidcup has been awarded a sustainability award at the LDSA Building Excellence Awards 2009. This project was one of the last projects completed that was secured prior to the MBO.

Special sustainability features included:

- Photovoltaic cells producing 1% of the buildings energy needs thus reducing the carbon footprint
- Recycling the waste water from the pool for use in the centres showers and toilets thus reducing water consumption and recovering the heat and energy from the waste water
- Heat recovery from the extracted air from within the building that would otherwise have been lost as part of the building ventilation system
